Map out learning with SMART Ideas concept-mapping software

Help students visualize abstract concepts and complex ideas with SMART Ideas™ concept-mapping software. It allows you to create dynamic and colorful maps with shapes and connectors. Enhance maps with curriculum-specific and interactive clip art to aid learning and make lessons interesting. You can also add multimedia content and attach links.

Take them to the next level

Create multilevel maps to illustrate the progression from one concept to another using the software's easy navigation features. View maps in various formats to help students learn from multiple perspectives. Use the global view to show all the map levels

at once, or the presentation view to remove toolbars for a large, clear display. Switch between the diagram view and the text outline view to demonstrate the connection between visual and written ideas. With SMART Ideas software, learning takes shape.

Keep learning. Press on.
