SMART Meeting Pro 2010

Version 2.0

About SMART Meeting Pro 2010

SMART Meeting Pro 2010 is an easy-to-use whiteboard application that enhances your SMART interactive product experience.

SMART Meeting Pro includes SMART Product Drivers that translate screen contact into mouse behavior. When you install SMART Meeting Pro on a computer connected to a SMART interactive product (an interactive whiteboard or an interactive pen display), you have touch control of the computer as soon as the computer starts.

After you install SMART Meeting Pro, the SMART Meeting Pro icon  appears in the Windows® notification area.

NOTE

If you see  in the notification area, your SMART product isn't connected or is behaving unexpectedly.

IMPORTANT

Before you begin using your interactive product, make sure you can see the computer image on it. If you're using an interactive whiteboard, make sure your projector or flat-panel display is turned on. If you're using a SMART Podium interactive pen display, be sure it's turned on and the video and USB cables from your computer are properly connected.

Standard Features

SMART Business Toolbar

The SMART Business toolbar gives you access to the software's main functions, as well as to your desktop. You can use this system with little or no training.

Desktop Mode Using Desktop mode, you can use the Pen tool or your interactive product's physical pen to write over any program running on your computer. When you select the Pen tool from the toolbar, the Ink Layer appears. The Ink Layer enables you to write and draw over any program running on your computer. If you're using an Ink Aware program while in Desktop mode, the Ink Layer doesn't open, and you can write or draw your notes directly into your file.

Whiteboard Mode Using Whiteboard mode, you can track what happens in a meeting with handwritten notes and screen captures. You can then save your notes to a USB storage device, the computer desktop or the network, or you can e-mail them to meeting participants as a .notebook or .ppt file.

Reset Room This feature ends your meeting. Use it to shut down the applications and to reset the system to how it was before the meeting started.

Configuration

Press the SMART Meeting Pro icon in the notification area to access configuration settings including screen orientation and languages.

Orient the Screen To provide accurate touch response, SMART Meeting Pro needs to know the exact location of your computer's image on the interactive screen. You provide this information by performing an orientation procedure—a simple process of touching firmly and precisely on a target.

- Languages**
- English (U.S.) and English (UK)
 - Chinese (Simplified)
 - French
 - German
 - Portuguese (Brazil) and Portuguese (Portugal)
 - Spanish (Mexico) and Spanish (Spain)

Microsoft® Office and Adobe® Integration

Ink Aware Applications Microsoft Excel®, Word and PowerPoint® and Adobe Acrobat® Pro are Ink Aware applications. This means your .doc, .docx, .xls, .xlsx, .ppt, .pptx and .pdf files become interactive when you open them. You can insert and save your notes and images directly into the Aware application's file. You can also save a screen capture of your open file in SMART Meeting Pro. When you do this, the active page and your notes appear as an object in Whiteboard mode, and the Aware application's file is unchanged.

Computer Requirements

Installation Requirements

To install SMART Meeting Pro and use its full functionality, have the following information available:

Your software product key. When you order a software license, your [authorized SMART reseller](#) gives you a product key to activate the software. If you don't have a product key, you can use the software for a 30-day trial period.

Your e-mail server and e-mail address. To e-mail your files from SMART Meeting Pro, you must provide an e-mail server and an e-mail address.
